Design Statement
Registration Number: 2015-14

Joshua Tree National Park Visitor Center is located on an undisturbed two-acre site that provides spectacular views of the surrounding desert environment. Upon arrival, visitors have ample parking on both sides of the existing roadway adjacent to the project site. On the west side of the site you have access to the Cap Rock Nature Trail and on the west, access to the Visitor Center.

Visitors to the Center begin their journey from the parking lot along a designated path, which itself mimics a winding desert trail. Designed to take advantage of the vast desert landscape, guiding visitors and reinforcing views of the Center which mimic the many canyons within the Park. The path is lined with the flora of the Park designed as an educational experience as one traverses the site.

As visitors approach the two buildings, they enter a narrow canyon, a gorge, a gathering point, that leads to the main entrance of the Center. Looking up, visitors will see a boulder wedged between the two curving buildings designating this important portal. Underneath the boulder the space fully opens up giving visitors access to all the resources, information, and facilities that the Center provides.

The building forms were designed to repackage the lack and feel of a rock outcropping within the Park. The roof forms are irregular in design. One roof form ascends while the other descends, simulating the convergence of two rock outcroppings to form a man-made canyon in the desert. Rammed earth walls anchor the buildings to the desert floor and the Corten steel roof mimics the intense color of the surrounding desert mountains linking the building aesthetic to dormant mining equipment now left to rust and decay in the Park.

Exterior spaces are designed to take advantage of the proximity to the desert landscape. The main exhibit building on the north includes an area with amphitheater seating for lectures and performances. The exterior space to the west, between the two buildings, includes permanent concrete benches and a fire ring that can be utilized for formal educational gatherings and group sky viewing. The exterior space to the south is an informal space for relaxation and casual dining. Shading for these exterior areas, a critical element in the desert environment, is resolved naturally through the use of Palo Verde trees, commonly found throughout the desert.
